

John Mark DC. Gabriel

Software Engineer | .NET & Full-Stack Development

Rizal, Philippines | +63 966 409 9165 | jmgabriel12.jg@gmail.com

Portfolio: jmgabriel13.github.io/portfolio.dev | LinkedIn: johnmarkgabriel | GitHub: jmgabriel13

PROFILE

Software engineer specializing in .NET and full-stack development across lending applications, workflow decisioning, and production delivery. Owns changes from implementation and validation through release coordination and production checks. Builds developer tooling and AI-assisted workflows to support delivery, traceability, and accomplishment tracking.

CURRENT EXPERIENCE

Software Engineer (official title: Mid .NET Developer)

MONEYME | Australian FinTech | May 2024 - Present

- Develop and maintain MONEYME's lending platform across web applications, services, and databases using C#/.NET, Razor, Vue, jQuery, SQL Server, and Azure Functions.
- Implement lending workflow and decisioning changes, including SQL criteria, data queries, action branches, brand-specific rules, and workflow execution behavior.
- Own release activities for assigned changes: preparation, risk classification, approval coordination, code and database release planning, rollback scripts, QA validation, and post-deployment checks.
- Investigate production and compliance-sensitive behavior by tracing application code and data flows; identify root causes across customer communications, commission processing, and credit-data handling.
- Coordinate stories and epics across application, communications, and infrastructure teams, tracking dependencies, feature flags, pull-request ownership, approvals, and release readiness.
- Build and maintain local Node.js/Express and Vite/React tooling for ticket-linked worktrees, embedded terminals, environment orchestration, delivery-history analysis, and standup preparation; validate tooling with automated tests and negative controls.
- Build accomplishment and KPI evidence tracking, and maintain custom Claude Code skills and specialized agents supporting implementation, validation, pull requests, QA endorsement, release, and production verification.

TECHNICAL SKILLS

Backend & data: C#, .NET, ASP.NET MVC/Web API, SQL Server, Azure Functions, Node.js, Express

Frontend: Razor, Vue, jQuery, React, JavaScript, TypeScript, AngularJS, HTML, CSS, Vite

Delivery & tooling: Git, Azure DevOps, Jira, code/database releases, rollback planning, root-cause analysis, Claude Code, Codex

John Mark DC. Gabriel

EARLIER EXPERIENCE

.NET Developer

Collabera Digital | Feb 2022 - Apr 2024

- Developed, maintained, tested, and documented web applications and software across business requirements.
- Prepared implementation plans for deployment to Linux environments and maintained system and program documentation.
- Provided technical guidance to junior engineers on common work packages.

Junior .NET Developer

SDS Solutions I.T Outsourcing, Inc. | Sep 2020 - Feb 2022

- Developed web pages and APIs with C#, ASP.NET MVC/Web API, AngularJS, and SQL Server; integrated third-party APIs and supported client applications.
- Created console-based background services for scheduled and near-real-time processing.

Facilities IT Admin Intern

Streetcorner Lending Corporation (Akulaku) | Apr 2019 - Jun 2019

- Built a desktop application for HR records management and assisted with server setup, troubleshooting, and maintenance.

SELECTED PUBLIC PROJECTS

Loan Quote Calculator | ASP.NET Core, React, TypeScript, SQL

Public coding-challenge project covering lending quotes, interest, and fees with separate domain, application, infrastructure, and web layers. Includes focused calculation and handler tests.

Custom POS API | C#, .NET Core

Practice backend using Clean Architecture to separate POS application flow, domain rules, and infrastructure concerns.

EDUCATION

Bachelor of Science in Computer Science

The University of Manila | 2016 - 2020
